# Executive Summary

## Compliance with PCI, SOX, ISO27001,

**Log Manager** – Collection, Correlation, Storage and Analysis of Log Data

**Threat Manager** – Integrated Vulnerability Assessment and Intrusion Detection

### SaaS Delivery

Eliminate Implementation  
Effort & Risk

Deploy in hours, not  
months

Eliminate need for  
training and specialised  
security skills

### Managed Monitoring Services

Provide 24/7 expert  
monitoring and support

Eliminate need to train,  
employ and keep rare  
and expensive security  
resources

### Reduced Total Cost

Save time, effort, risk

Typical savings 50-70%  
on in-house solutions

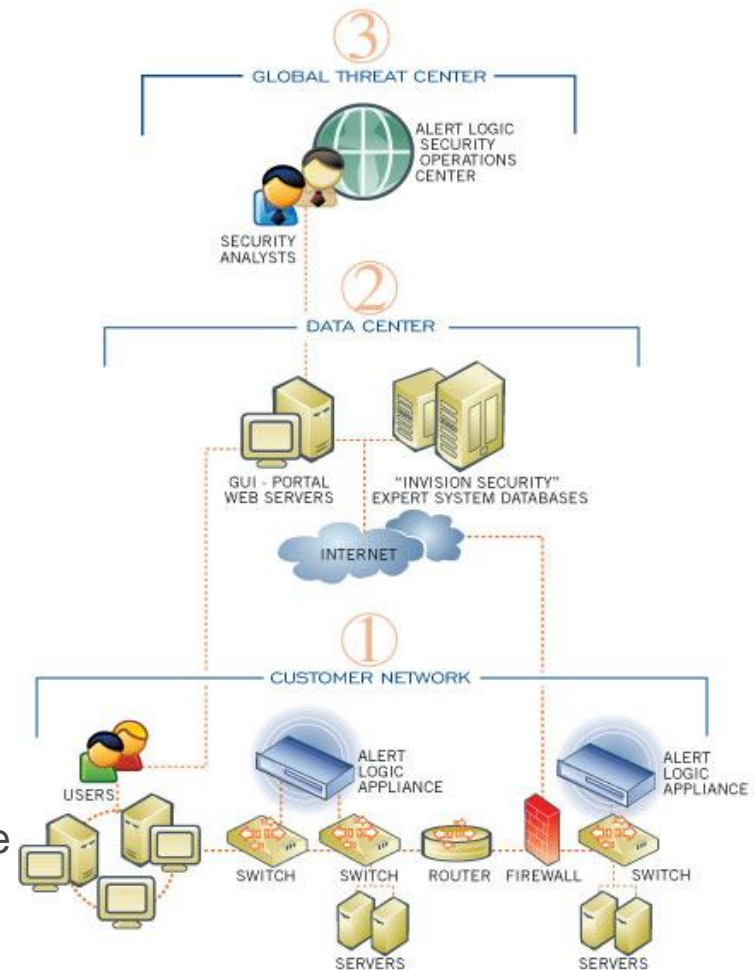

Focus on running the  
business, not security  
infrastructure

*As trusted by Sears, Citi, Rackspace and 1000 others*

# Threat Manager

## Integrated Vulnerability Assessment and Intrusion Detection

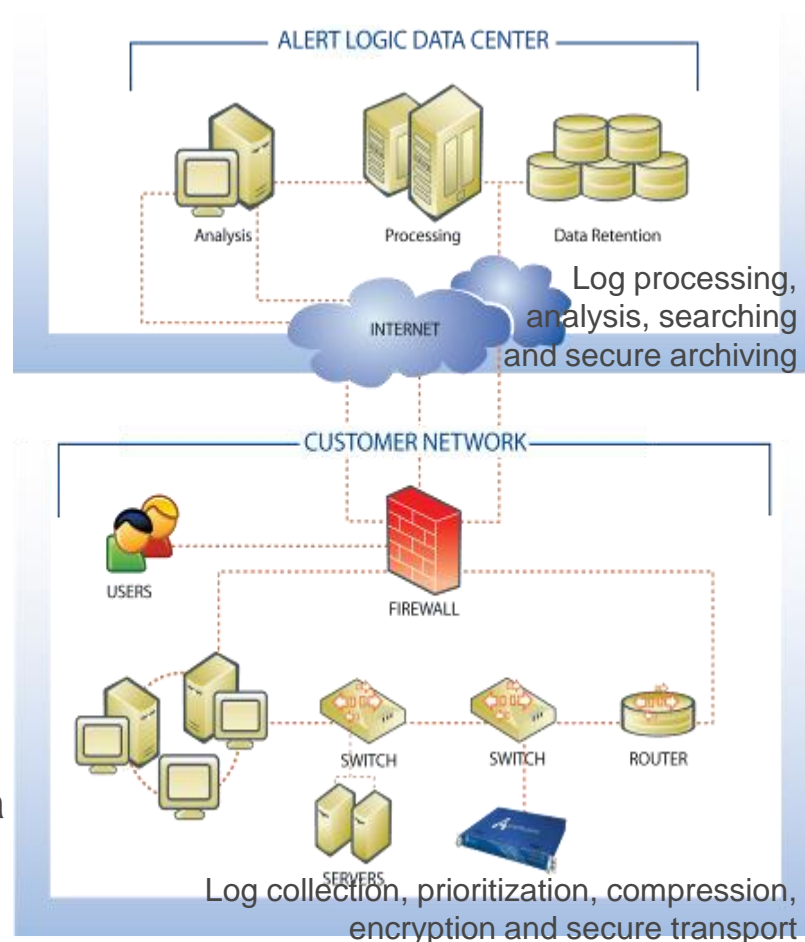

- What it does:
  - Identifies internal/external vulnerabilities
  - Real-time protection against threats
  - PCI Approved Scanning Vendor
- Why it's different and better:
  - Unique SaaS delivery model and cloud-ready technology eliminates implementation risk
  - Optional Security analysts provide monitoring, analysis and incident response services
  - Patent-pending grid computing and storage architecture delivers best-in-class performance
  - Patented expert system detects threats and defends against attacks

# Log Manager

## SaaS Log Management

- What it does:
  - Automatically collect, store, correlate, search and report log data
- Why it's different and better:
  - Unique SaaS delivery model and cloud-ready technology eliminates implementation risk
  - Optional Security analysts provide monitoring, analysis and incident response services
  - Patent-pending grid computing and storage architecture provides high-speed searching and parsing of log data
  - Correlates log, threat and vulnerability data to identify suspicious activity

# Benefit Summary

## Easy to Buy

- No capital equipment to purchase and maintain
- All costs included in one transparent monthly fee
- Save up to 70% of total cost of in-house solutions

## Easy to Deploy

- Single 1U deployment for Vulnerability, Intrusion and Log Management
- SaaS architecture eliminates analysis and storage deployment
- Deployment takes hours, not months

## Easy to Operate

- Infrastructure maintenance eliminated
- Unlimited support and training by email, web and phone
- Powerful analysis toolsets simplifies monitoring, or
- 24/7 Log and Intrusion Monitoring avoids need for in-house analysts
