

## ALERT LOGIC THREAT MANAGER

### Critical Layer of Network Defence

As network attacks become more sophisticated, your IT organisation is faced with escalating challenges to effectively secure your network. In addition, compliance requirements are more demanding, driven by several factors including growing financial dependence on application software and data, increasingly sophisticated criminal activity, and escalating regulation designed to safeguard and protect electronic assets.

Alert Logic's cloud-powered Threat Manager solution effectively defends and protects your network against these complex internal and external threats. Threat Manager leverages our patented, cloud-powered expert system to automatically identify behaviour patterns missed by most stand-alone and traditional network security products.

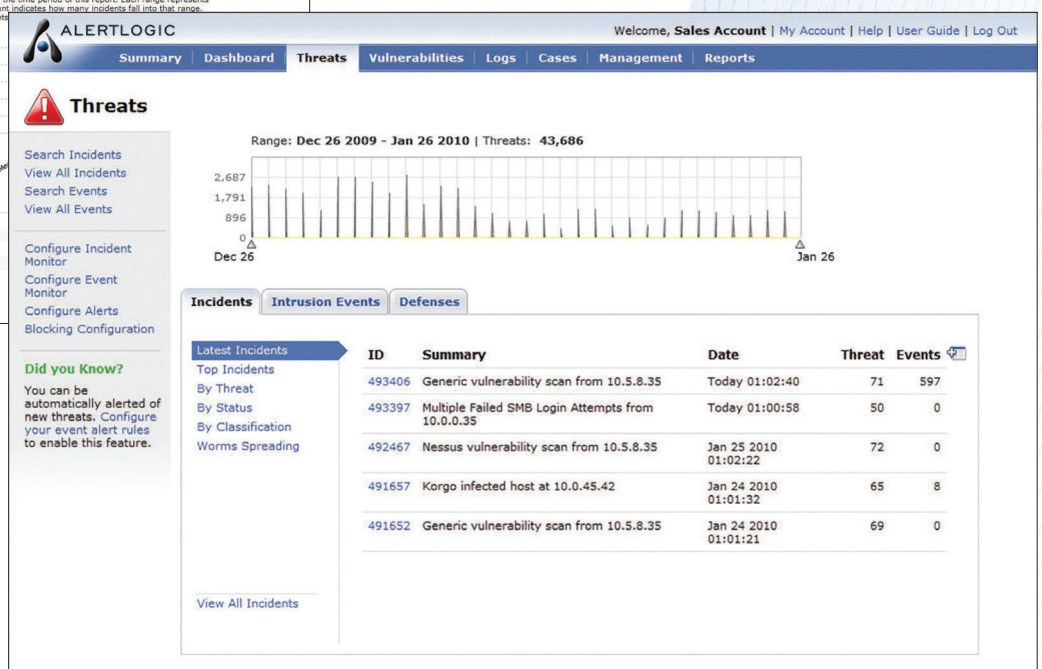

### Smartest Way to Manage Threats

Alert Logic's Threat Manager is the smartest choice for overregulated businesses with underfunded IT departments.

- 1. Detect and Defend:** The Alert Logic centralised expert system uses our patented 7-Factor Threat Scenario Modeling to correlate intrusion alert data with vulnerability data and real-time threat trend information from all customers so that real risks are quickly identified and actions are immediately taken to mitigate them.
- 2. Vulnerability Assessment:** Alert Logic is a PCI Security Standards Council Approved Scanning Vendor. Threat Manager scans your network for internal and external vulnerabilities to determine where you're vulnerable. Once the vulnerabilities have been identified, we provide the knowledge to remediate them—proactively defending your network.
- 3. ActiveWatch service:** ActiveWatch Monitoring works with Threat Manager to provide 24x7 internal network monitoring, and faster, more effective incident response by certified security experts in Alert Logic's Security Operations Centre.

Quickly identify threats in the user interface

# How We Do It

## Detect

Identify bots and worm infections before they spread, leveraging our centralised expert system and patented 7-Factor Threat Scenario Modeling so that real risks are quickly identified.

## Defend

Automatically protect your network from within by detecting worm infections at their source and blocking them at your firewalls, switches, and routers before they spread throughout your network.

## Monitor

Our ActiveWatch Monitoring service provides 24x7 monitoring of your internal network by Alert Logic Security Operations Centre analysts to increase the accuracy of threat detection and deliver faster, more effective incident response.

## Approved Scanning Vendor for PCI Compliance

Schedule quarterly PCI internal and external scans. Once a scan is performed, you can generate the proper report to send to your acquiring bank or processor.

## Trend and Report

Our solution is designed to enable you to quickly determine security posture and threat levels through reporting.

## Assess Vulnerabilities

External vulnerability scans are run from our Security Operations Centre to proactively identify vulnerabilities that could lead to potential security incidents.

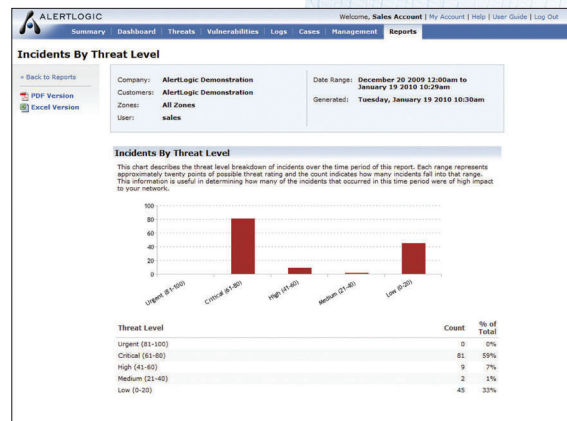

Internal vulnerability scans are performed from the appliance level to determine where your network may be susceptible to a possible security breach.

## Manage Workflow and Compliance

Turn your threat data into an audit-ready process, backed by our workflow automation technology and compliance expertise.

Patented 7-Factor Threat Scenario Modeling

Comprehensive out-of-the-box reporting
